CLASS 9 ALGEBRA - LINEAR EQUATIONS

10 questions - 2 marks each - Show your working

Name: _____ Date: _____

1. Solve: $3x + 5 = 26$.

2. Solve: $5(2y - 3) = 35$.

3. Solve: $4a - 7 = 2a + 9$.

4. Simplify: $3x + 4 - 2x + 7$.

5. Expand: $4(2m - 3)$.

6. Factorise: $6x + 18$.

7. If $2x + y = 13$ and $y = 5$, find x.

8. Two consecutive integers have a sum of 35. Find them.

9. A rectangle has length 3 cm more than its width and perimeter 30 cm. Find its dimensions.

10. Three quarters of a number, plus 2, equals 17. Find the number.
